A. Download VMware vCenter or the vSphere client from vmware.com

NEW QUESTION: 2

転送中のデータを強力的に暗号化して、フルシステムバックアップをサードパーティプロバイダに実装する必要があります。D.
フルドライブファイルハッシュは別のストレージに格納されたハッシュで実装されるべきです。E.
強力な認証は外部の生体認証装置を介して実施されるべきです。F.
機密データを転送するときは、分割トンネルVPNを実施する必要があります。Answer: A,B

Explanation: Explanation Web mail, Instant Messaging and personal networking sites are some of the most common means by which corporate data is leaked. Data loss prevention (DLP) is a strategy for making sure that end users do not send sensitive or critical information outside the corporate network. The term is also used to describe software products that help a network administrator control what data end users can transfer. DLP software products use business rules to classify and protect confidential and critical information so that unauthorized end users cannot accidentally or maliciously share data whose disclosure could put the organization at risk. For example, if an employee tried to forward a business email outside the corporate domain or upload a corporate file to a consumer cloud storage service like Dropbox, the employee would be denied permission. Full-tunnel VPN should be required for all network communication. This will ensure that all data transmitted over the network is encrypted which would prevent a malicious user accessing the data by using packet sniffing.

NEW QUESTION: 3 Which one of these is a valid HSRP Virtual Mac Address? A. 0000.5E00.0110 B. 0000.C007.0201 C. 0000.0C07.AC01 D. 0007.B400.1203 Answer: C Explanation:

Explanation/Reference: Hot Standby Router Protocol Features and Functionality Reference: http://www.cisco.com/en/US/tech/tk648/tk362/technologies_tech_note09186a0080094a91.shtml Explanation: HSRP Addressing In most cases when you configure routers to be part of an HSRP group, they listen for the HSRP MAC address for that group as well as their own burned-in MAC address. The exception is routers whose Ethernet controllers only recognize a single MAC address (for example, the Lance controller on the Cisco 2500 and Cisco 4500 routers). These routers use the HSRP MAC address when they are the Active router, and their burned-in address when they are not. HSRP uses the following MAC address on all media except Token Ring: 0000.0c07.ac** (where ** is the HSRP group number)
