So try to enjoy life.

**NEW QUESTION: 1**Which ONE of the following most accurately describes corporate governance?  
**A.** It is the set of rules contained in the constitution of listed companies which governs the relationship between the board and the shareholders  
**B.** It is the body of rules and ethics primarily concerned with the effective control, business efficacy and accountability of the management of public-listed companies for the benefit of stakeholders  
**C.** It is a body of law, morals and ethics designed to ensure that the shareholders of listed companies are treated fairly by the board  
**D.** It is a code of best practice which instructs directors of listed companies how to maximise profits for the benefit of shareholders  
**Answer: B**

**NEW QUESTION: 2****A.** Option D**B.** Option B**C.** Option C**D.** Option A**Answer: D**

**NEW QUESTION: 3**Client-Side Mobile applications access data from the server via what type of interaction?  
**A.** JAX-WS web services and WSDL messages  
**B.** Any of the above  
**C.** REST calls to the server and JSON responses  
**D.** AJAX  
**Answer: C**

**NEW QUESTION: 4****A.** Option D**B.** Option B**C.** Option C**D.** Option A**Answer: D**  
**Explanation:**  
Explanation To isolate the VMs, we could use Windows Firewall or Network Security Groups (NSG) but they're not options here. If we move the VMs to a new subnet in the same virtual network, traffic can still flow to VMs on the other subnet. We would still need additional security such as an NSG; therefore, answer A is incorrect. The answer is to create a new virtual network and move the VMs to the new network. This would provide the required isolation without the need for additional security such as an NSG.
