**NEW QUESTION: 2Answer: Explanation:Explanation**Box 1: Shut down VM1.Box 2: Modify the virtual switch settings of the legacy network adapter.Box 3: Modify the BIOS settings of VM1.  
Note:Step 1: The VM need to be shutdown first.Step 2:1. You need to create a virtual switch. This is needed for the Virtual Machine to be able to communicate with the network. If you already have created a virtual machine for your network, you can skip this step. Start by right-clicking the Hyper-V host in Hyper-V Manager and selecting "Virtual Switch Manager".2. Create a new Virtual Switch. Select "External", which is similar to "Bridged" if you're used to other virtualization software.3. Give the new Virtual Switch a name.4. By default, there is only a "Standard Network Adapter" installed on the Virtual Machine, but for PXE functionality you will need to add a "Legacy Network Adapter".5. Go to the "Legacy Network Adapter" that you just added and specify that it should use the Virtual Switch that you just created.Step 3: you should change the BIOS boot priority to make sure that the Virtual Machine always tries to boot first using the "Legacy Network Adapter". Just select the "Legacy Network Adapter" and move it to the top using the buttons.Step 4: Start your Virtual Machine and now PXE boot should work.

**NEW QUESTION: 3**Refer to the exhibit.Which address and mask combination represents a summary of the routes learned byEIGRP?**A. 192.168.25.0 255.255.255.240B. 192.168.25.0 255.255.255.252C. 192.168.25.16 255.255.255.240D. 192.168.25.28 255.255.255.252E. 192.168.25.28 255.255.255.240F. 192.168.25.16 255.255.255.252Answer: C**Explanation:The binary version of 20 is 10100.The binary version of 16 is 10000.The binary version of 24 is 11000. The binary version of 28 is 11100.The subnet mask is /28. The mask is 255.255.255.240.Note: From the output above, EIGRP learned 4 routes and we need to find out the summary of them:+ 192.168.25.16+ 192.168.25.20+ 192.168.25.24+ 192.168.25.28-> The increment should beE. 28 - 16 = 12 but 12 is not an exponentiation of 2 so we must choose 16 (24). Therefore the subnet mask is /28 (=1111 1111.1111 1111.1111 111.11110000) = 255.255.255.240.So, the best answer should be 192.168.25.16 255.255.255.240.
