**NEW QUESTION: 1**View the Exhibit and examine the structure of the CUSTOMERS table.You want to generate a report showing the last names and credit limits of all customers whose last names start with A, B, or C, and credit limit is below 10, 000.Evaluate the following two queries: Which statement is true regarding the execution of the above queries?**A.** Only the first query gives the correct result.**B.** Both execute successfully and give the same result.**C.** Both execute successfully but do not give the required result.**D.** Only the second query gives the correct result.**Answer: A**Explanation:Explanation/Reference:Explanation:

**NEW QUESTION: 2**Which of the following is the term used to describe the degree to which a task in an organisation is divided into a number of separate activities?**A.** Span of control**B.** Work specialisation**C.** Centralisation**D.** Formalisation**Answer: B**

**NEW QUESTION: 3**What is the difference between Access Control Lists (ACLs) and Capability Tables?**A.** They are basically the same.**B.** Capability tables are used for objects whereas access control lists are used for users.**C.** Access control lists are related/attached to an object whereas capability tables are related/attached to a subject.**D.** Access control lists are related/attached to a subject whereas capability tables are related/attached to an object.**Answer: C**Explanation: Capability tables are used to track, manage and apply controls based on the object and rights, or capabilities of a subject. For example, a table identifies the object, specifies access rights allowed for a subject, and permits access based on the user's possession of a capability (or ticket) for the object. It is a row within the matrix.To put it another way, A capability table is different from an ACL because the subject is bound to the capability table, whereas the object is bound to the ACL.CLEMENT NOTE:If we wish to express this very simply:Capabilities are attached to a subject and it describe what access the subject has to each of the objects on the row that matches with the subject within the matrix. It is a row within the matrix. ACL's are attached to objects, it describe who has access to the object and what type of access they have. It is a column within the matrix.The following are incorrect answers:"Access control lists are subject-based whereas capability tables are object-based" is incorrect."Capability tables are used for objects whereas access control lists are used for users" is incorrect."They are basically the same" is incorrect.
