**NEW QUESTION: 1**You have the following code.You need to return all of the products and their associated categories.How should you complete the code? To answer, drag the appropriate code elements to the correct targets in the answer area. Each code element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.**Answer:** Explanation:Explanation:Example: Join operations create associations between sequences that are not explicitly modeled in the data sources. For example you can perform a join to find all the customers and distributors who have the same location. In LINQ the join clause always works against object collections instead of database tables directly.C#  
var innerJoinQuery =from cust in customersjoin dist in distributors on cust.City equals dist.City  
select new { CustomerName = cust.Name, DistributorName = dist.Name };Reference:  
<https://msdn.microsoft.com/en-us/library/bb397927.aspx>

**NEW QUESTION: 2**Invoices received from a source system need to use a specific account based on 30 different expense types.
