NEW QUESTION: 1You are modifying a star schema data mart that feeds order data from a SQL Azure database into a SQL Server Analysis Services (SSAS) cube. The data mart contains two large tables that include flags and indicators for some orders. There are 100 different flag columns, each with 10 different indicator values. Some flags reuse indicators. The tables both have a granularity that matches the fact table. You have the following requirements: You need to modify the schema. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)
A. Define the surrogate key as a BIGINT data type. Combine the distinct flag/indicator combinations into a single dimension.
B. Define the surrogate key as a BIGINT data type. Create a single fact dimension in each table for its flags and indicators.
C. Define the surrogate key as an INT data type. Combine the distinct flag/indicator combinations into a single dimension.
D. Define the surrogate key as an INT data type. Create a single fact dimension in each table for its flags and indicators.
Answer: C
