Relevant to the format of the actual exam, With years of experience dealing with exam, they have thorough grasp of knowledge which appears clearly in our C_HCMOD_05 actual exam.

NEW QUESTION: 1 A server with IP address 209.165.202.150 is protected behind the inside interface of a Cisco ASA and the Internet on the outside interface. Users on the Internet need to access the server at any time, but the firewall administrator does not want to apply NAT to the address of the server because it is currently a public address. Which three of the following commands can be used to accomplish this? (Choose three.)
A. nat (inside) 0 209.165.202.150 255.255.255.255
B. nat (inside) 1 209.165.202.150 255.255.255.255
C. access-list no-nat permit ip host 209.165.202.150 any nat (inside) 0 access-list no-nat
D. static (inside, outside) 209.165.202.150 209.165.202.150 netmask 255.255.255.255
E. no nat-control
F. static (outside, inside) 209.165.202.150 209.165.202.150 netmask 255.255.255.255
Answer: B,C,D
Explanation/Reference: Explanation:

NEW QUESTION: 2 An SRX Series device is configured for inline tap mode. What will occur if Drop Packet is selected?
A. The SRX Series device will ignore the action Drop Packet.
B. The SRX Series device closes the connection and sends an RST packet to both the client and the server.
C. The SRX Series device drops a matching packet before it can reach its destination but does not close the connection.
D. The SRX Series device drops a matching packet associated with the connection, preventing traffic for the connection from reaching its destination.
Answer: D

NEW QUESTION: 3 The /usr/sbin/clcmd command is not working as documented in an administrator's reference. How can the administrator determine if the command being run is at the same level as the command being referenced in the documentation?
A. Use lspp-wto get

the fileset name, then check the level of the file set with lspp-1.**B.** Use ls-l to determine the last modified date of the command.**C.** Use lspp-1 to determine the fileset name and check the level.**D.** Get the fileset name from lspp-f, then check the level of the file set with lspp-1.

Answer: A

NEW QUESTION: 4DRAG DROPNote: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.You are developing a database to track customer orders. The database contains the following tables: Sales.Customers, Sales.Orders, and Sales.OrderLines. The following table describes the columns in Sales.Customers.The following table describes the columns in Sales.Orders.The following table describes the columns in Sales.OrderLines.You need to create a stored procedure that inserts data into the Customers table. The stored procedure must meet the following requirements:- Data changes occur as a single unit of work. - Data modifications that are successful are committed and a value of 0 is returned.- Data modifications that are unsuccessful are rolled back. The exception severity level is set to 16 and a value of -1 is returned.- The stored procedure uses a built-in scalar function to evaluate the current condition of data modifications.- The entire unit of work is terminated and rolled back if a run-time error occurs during execution of the stored procedure.How should complete the stored procedure definition? To answer, drag the appropriate Transact-SQL segments to the correct targets. Each Transact-SQL segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.**NOTE:** Each correct selection is worth one point.**Answer:** Explanation:Explanation:ExplanationBox 1: XACT_ABORT XACT_ABORT specifies whether SQL Server automatically rolls back the current transaction when a Transact-SQL statement raises a run-time error.When SET XACT_ABORT is ON, if a Transact-SQL statement raises a run-time error, the entire transaction is terminated and rolled back.Box 2: COMMITCommit the transaction.Box 3: XACT_STATEBox 4: ROLLBACKRollback the transactionBox 5: THROWTHROW raises an exception and the severity is set to 16.Requirement: Data modifications that are unsuccessful are rolled back. The exception severity level is set to 16 and a value of -1 is returned.References:
