C-TADM-22 dumps torrent will provide you with the latest exam information and the accurate answers.

NEW QUESTION: 1You configure OAuth2 authorization in API Management as shown in the exhibit. Use the drop-down to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Answer: Explanation: Explanation: Box 1: Web applications The Authorization Code Grant Type is used by both web apps and native apps to get an access token after a user authorizes an app.

Note: The Authorization Code grant type is used by confidential and public clients to exchange an authorization code for an access token. After the user returns to the client via the redirect URL, the application will get the authorization code from the URL and use it to request an access token.

Answers: Not Headless device authentication: A headless system is a computer that operates without a monitor, graphical user interface (GUI) or peripheral devices, such as keyboard and mouse. Headless computers are usually embedded systems in various devices or servers in multi-server data center environments. Industrial machines, automobiles, medical equipment, cameras, household appliances, airplanes, vending machines and toys are among the myriad possible hosts of embedded systems.

Box 2: Client Credentials How to include additional client data In case you need to store additional details about a client that don't fit into the standard parameter set the custom data parameter comes to help: POST /c2id/clients HTTP/1.1 Host: demo.c2id.com Content-Type: application/json Authorization: Bearer ztucZS1ZyFKgh0tUEruUtiSTXhnexmd6{"redirect_uris" : [

"https://myapp.example.com/callback"], "data" : { "reg_type" : "3rd-party", "approved" : true, "author_id" : 792440 }}

The data parameter permits arbitrary content packaged in a JSON object. To set it you will need the master registration token or a one-time access token with a client-reg:data scope. Incorrect Answers: Authorization protocols provide a state parameter that allows you to restore the previous state of your application. The state parameter preserves some state object set by the client in the Authorization request and makes it available to the client in the response. Reference:
