the company's interests, especially in order to help the students in the shortest possible time to obtain qualification certificates.

820-605 Braindumps, We will not take a risk at all, With the help of the Cisco 820-605 brain dumps and preparation material provided by Estruturit, you will be able to get 820-605 certified at the first attempt.

Download of 820-605 dumps pdf actual exam materials and tutorials for Cisco certification for customers, Real Success Guaranteed with Updated 820-605 exam questions and answers pdf pdf dumps Materials.

You may eager to realize our materials now.

NEW QUESTION: 1 Which of the following statements is true of IAM? **A.** If you are configuring MFA for a user who will use a smartphone to generate an OTP, the smartphone is not required in order to finish the wizard. **B.** If you are configuring MFA for a user who will use a smartphone to generate an OTP, you must have the smartphone available in order to finish the wizard. **C.** None of these are correct. **D.** If you are configuring MFA for a user who will use a smartphone to generate an OTP, you can finish the wizard on any device and later use the smartphone for authentication. **Answer: B** Explanation: MFA can be used either with a specific MFA-enabled device or by installing an application on a smartphone. If a user chooses to use her smartphone, physical access to the device is required in order to complete the configuration wizard. Reference:

NEW QUESTION: 2 Which three statements about IS-IS are true? (Choose three.) **A.** IS-IS is directly encapsulated in the data link layer. **B.** IS-IS is not encapsulated in IP. **C.** IS-IS is an IETF standard. **D.** 0XFEFE is used in the Layer 2 header to identify the Layer 3 protocol. **E.** IS-IS can be used to route the IPX protocol. **F.** IS-IS uses protocol ID 93. **Answer: A,B,D**

NEW QUESTION: 3 Your role of Network Administrator at ABC.com includes the management of the Active Directory Domain Services (AD DS) domain named ABC.com. The network includes servers that run Windows Server 2008 R2 Service Pack 1 (SP1) and Windows Server 2012. A Windows Server 2008 R2 SP1 server named ABC-DHCP1 runs the DHCP Server role. All client computers on the network are assigned dynamic IP configurations from ABC-DHCP1. All domain member servers receive their IP configurations from ABC-DHCP1 using IP Address Reservations. All domain controllers have static IP addresses. You install a new Windows Server 2012 server named ABC-Host1. ABC-Host1 has six physical network adapters. Each network adapter is connected to the network. You configure two network adapter teams each containing two of the network adapters. You need to configure IP Reservations on ABC-DHCP1 for ABC-Host1. How many reservations should you configure? **A. 0 B. 1 C. 2 D. 3** **Answer: C** Explanation: Explanation/Reference: Explanation:

NEW QUESTION: 4 Which of the following access control models is based on sensitivity labels? **A.** Mandatory access control **B.** Rule-based access control **C.** Discretionary access control **D.** Role-based access control **Answer: A** Explanation: Explanation/Reference: Access decisions are made based on the clearance of the subject and the sensitivity label of the object. Example: Eve has a "Secret" security clearance and is able to access the "Mugwump Missile Design Profile" because its sensitivity label is "Secret." She is denied access to the "Presidential Toilet Tissue Formula" because its sensitivity label is "Top Secret." The other answers are not correct because: Discretionary Access Control is incorrect because in DAC access to data is determined by the data owner. For example, Joe owns the "Secret Chili Recipe" and grants read access to Charles. Role Based Access Control is incorrect because in RBAC access decisions are made

based on the role held by the user. For example, Jane has the role "Auditor" and that role includes read permission on the "System Audit Log." Rule Based Access Control is incorrect because it is a form of MAC. A good example would be a Firewall where rules are defined and apply to anyone connecting through the firewall.
