NEW QUESTION: 1In the master patient index, which is filed by last name, Jill Thomas-Jones would be **A. J-O-N-E-S,J-I-L-L-T-H-J-O-M-A-SB. T-H-O-M-A-S,J-I-L-L-J-O-N-E-SC. T-H-O-M-A-S-J-O-N-E-S,J-I-L-LD. J-I-L-L-T-H-O-M-A-S-J-O-N-E-S****Answer: C**

NEW QUESTION: 2Brute force attacks against encryption keys have increased in potency because of increased computing power. Which of the following is often considered a good protection against the brute force cryptography attack?**A. The use of session keys.B. Nothing can defend you against a brute force crypto key attack.C. The use of good key generators.D. Algorithms that are immune to brute force key attacks.****Answer: A****Explanation:** Explanation/Reference:Explanation:A session key is a single-use symmetric key that is used to encrypt messages between two users during a communication session.If Tanya has a symmetric key she uses to always encrypt messages between Lance and herself, then this symmetric key would not be regenerated or changed. They would use the same key every time they communicated using encryption. However, using the same key repeatedly increases the chances of the key being captured and the secure communication being compromised. If, on the other hand, a new symmetric key were generated each time Lance and Tanya wanted to communicate, it would be used only during their one dialogue and then destroyed. If they wanted to communicate an hour later, a new session key would be created and shared.A session key provides more protection than static symmetric keys because it is valid for only one session between two computers. If an attacker were able to capture the session key, she would have a very small window of time to use it to try to decrypt messages being passed back and forth.**Incorrect Answers:**A: A strong encryption key offers no protection against brute force attacks. If the same key is always used, once an attacker obtains the key, he would be able to decrypt the data.C: It is not true that nothing can defend you against a brute force crypto key attack. Using a different key every time is a good defense.D: There are no algorithms that are immune to brute force key attacks. This is why it is a good idea to use a different key every time.**References:**Harris, Shon, All In One CISSP Exam Guide, 6th Edition, McGraw-Hill, 2013, pp. 798-799

NEW QUESTION: 3An Alexa Skill Builder needs to have knowledge of the previous prompt that was presented to the user in order to give context to the user's response. How can the Builder accomplish this?
A. Store a reference to the prompt used as a session attribute
B. Find the corresponding prompt using the list events feature
C. Parse the context object from the skill request.
D. Call the Intent Request History API to identify which prompt was used.
Answer: D

NEW QUESTION: 4What type of attack is shown here?
A. Distributed Denial of Service Attack
B. Cluster Service Attack
C. Denial of Service Attack
D. Bandwidth exhaust Attack
Answer: A
Explanation: We think this is a DDoS attack not DoS because the attack is initiated in multiple zombies not single machine.
