NEW QUESTION: 2You have a data model that you plan to implement in an Azure SQL data warehouse as shown in the following exhibit.All the dimension tables will be less than 5 GB after compression, and the fact table will be approximately 6 TB.Which type of table should you

use for each table? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Box 1: Replicated Replicated tables are ideal for small star-schema dimension tables, because the fact table is often distributed on a column that is not compatible with the connected dimension tables. If this case applies to your schema, consider changing small dimension tables currently implemented as round-robin to replicated. Box 2: Replicated Box 3: Replicated Box 4: Hash-distributed For Fact tables use hash-distribution with clustered columnstore index. Performance improves when two hash tables are joined on the same distribution column. References:
