Answer: AExplanation:A stack set lets you create stacks in AWS accounts across regions by using a single AWS CloudFormation template. All the resources included in each stack are defined by the stack set's AWS CloudFormation template. As you create the stack set, you specify the template to use, as well as any parameters and capabilities that template requires.

NEW QUESTION: 3Your company has an office in Seattle.You have an Azure subscription that contains a virtual network named VNET1.You create a site-to-site VPN between the Seattle office and VNET1.VNET1 contains the subnets shown in the following table.You need to redirect all Internet-bound traffic from Subnet1 to the Seattle office.What should you create?**A.** a route for Subnet1 That uses the virtual network gateway as the next hop**B.** a route for GatewaySubnet that uses the virtual network gateway as the next hop**C.** a route for GatewaySubnet that uses the local network gateway as the next hop**D.** a route for Subnet1 that uses The local network gateway as the next hop**Answer: A**Explanation:A route with the 0.0.0.0/0 address prefix instructs Azure how to route traffic destined for an IP address that is not within the address prefix of any other route in a subnet's route table. When a subnet is created, Azure creates a default route to the 0.0.0.0/0 address prefix, with the Internet next hop type. We need to create a custom route in Azure to use a virtual network gateway in the Seattle office as the next hop.References:
