The solution must meet the following requirements: Provide fault tolerance if a single disk fails. Maximize the amount of useable storage space. What should you create? **A.** A spanned volume **B.** A mirrored space **C.** A simple space **D.** A parity space **Answer: D** Explanation: Explanation/Reference: Explanation: Simple space does not provide fault tolerance, neither does spanned volumes, whereas parity & mirrored spaces do. Parity mirroring gives more usable space than either mirroring mode (a 20GB storage space configured with two-way mirroring will require about 40GB of physical disk space, but a 20GB parity storage space requires only about 30GB) but comes with the aforementioned performance hit. <http://technet.microsoft.com/en-us/library/jj822938.aspx>
