(Choose three.)**A.** Download "binary/to IE" from Avaya Aura System Manager (SMGR).**B.** Add the CA certificate to CM using "Security/ Trusted Certificates".**C.** Download "PEM file" from Avaya Aura System Manager (SMGR).**D.** Upload CA certificate to CM using "Miscellaneous/Download files" on SMI screen.**E.** Export SM Identity certificate from SMGR and import it into CM using "Security/Trusted Certificates".**Answer: B,C,D**

**NEW QUESTION: 3**A security analyst has been asked to develop a quantitative risk analysis and risk assessment for the company's online shopping application. Based on heuristic information from the Security Operations Center (SOC), a Denial of Service Attack (DoS) has been successfully executed 5 times a year. The Business Operations department has determined the loss associated to each attack is \$40,000. After implementing application caching, the number of DoS attacks was reduced to one time a year. The cost of the countermeasures was \$100,000. Which of the following is the monetary value earned during the first year of operation?**A.** \$140,000**B.** \$200,000**C.** \$60,000**D.** \$100,000**Answer: C**  
Explanation:  
ALE before implementing application caching:  
 $ALE = ARO \times SLE$   
 $ALE = 5 \times \$40,000$   
 $ALE = \$200,000$   
ALE after implementing application caching:  
 $ALE = ARO \times SLE$   
 $ALE = 1 \times \$40,000$   
 $ALE = \$40,000$   
The monetary value earned would be the sum of subtracting the ALE calculated after implementing application caching and the cost of the countermeasures, from the ALE calculated before implementing application caching.  
Monetary value earned =  $\$200,000 - \$40,000 - \$100,000$   
Monetary value earned = \$60,000
