(2つ選択してください。) **A.** リスナー**B.** ロードバランサー名**C.** 証明書**D.**

2つのパブリックサブネット**E.** バックエンドセット**Answer: A,E**Explanation:Explanation

References: <https://docs.cloud.oracle.com/en-us/iaas/Content/GSG/Tasks/loadbalancing.htm>

NEW QUESTION: 3You administer laptops that run Windows 8 Enterprise. The laptops are members of an Active Directory domain and are configured with IPv6 disabled. Some users require access to the internal company database servers while traveling. You need to configure the requested network connection to the database servers. What should you configure on the laptops?**A.** A DirectAccess connection to the company network**B.** A metered network connection**C.** Out of band management**D.** A virtual private network (VPN) connection to the company network**Answer: D**

NEW QUESTION: 4Chaincode is a decentralized transactional program, running on the validating nodes. As with every chaincode, it implements the _____ in particular, Init and Invoke functions. What does is actually implemented?**A.** EVMB.**B.** SDK**C.**

Chaincode interface **D. REST Interface** **Answer: C** Explanation: Explanation Chaincode is a decentralized transactional program, running on the validating nodes. As with every chaincode, it implements the Chaincode interface in particular, Init and Invoke functions. Init is called during Instantiate transaction after the chaincode container has been established for the first time, allowing the chaincode to initialize its internal data. Invoke is called to update or query the ledger in a proposal transaction. Updated state variables are not committed to the ledger until the transaction is committed.
