NEW QUESTION: 1The helpdesk is receiving multiple calls about slow and intermittent Internet access from the finance department. The following information is compiled: Caller 1, IP 172.16.35.217, NETMASK 255.255.254.0 Caller 2, IP 172.16.35.53, NETMASK 255.255.254.0 Caller 3, IP 172.16.35.173, NETMASK 255.255.254.0 All callers are connected to the same switch and are routed by a router with five built-in interfaces. The upstream router interface's MAC is 00-01-42-32-ab-1a A packet capture shows the following: 09:05:15.934840 arp reply 172.16.34.1 is-at 00:01:42:32:ab:1a (00:01:42:32:ab:1a) 09:06:16.124850 arp reply 172.16.34.1 is-at 00:01:42:32:ab:1a (00:01:42:32:ab:1a) 09:07:25.439811 arp reply 172.16.34.1 is-at 00:01:42:32:ab:1a (00:01:42:32:ab:1a) 09:08:10.937590 IP 172.16.35.1 > 172.16.35.255: ICMP echo request, id 2305, seq 1, length 65534 09:08:10.937591 IP 172.16.35.1 > 172.16.35.255: ICMP echo request, id 2306, seq 2, length 65534 09:08:10.937592 IP 172.16.35.1 > 172.16.35.255: ICMP echo request, id 2307, seq 3, length 65534 Which of the following is occurring on the network? **A.** A denial of service attack is targeting at the router. **B.** An ARP flood attack is targeting at the router. **C.** A man-in-the-middle attack is underway on the network. **D.** The default gateway is being spoofed on the network. **Answer: A** Explanation: The above packet capture shows an attack where the attacker is busy consuming your resources (in this case the router) and preventing normal use. This is thus a Denial Of Service Attack. Incorrect Answers: A: A man-in-the-middle attack is when an attacker intercepts and perhaps changes the data that is transmitted between two users. The packet capture is not indicative of a man-in-the-middle attack. B: With an ARP flood attack thousands of spoofed data packets with different physical addresses are sent to a device. This is not the case here. C: A gateway being spoofed show up as any random number that the attacker feels like listing as the caller. This is not what is exhibited in this case. NEW QUESTION: 2Symmetric encryption algorithms are known to be fast but present great challenges on the key management side. Asymmetric encryption algorithms are slow but allow communication with a remote host without having to transfer a key out of band or in person. If we combine the strength of both crypto systems where we use the symmetric algorithm to encrypt the bulk of the data and then use the asymmetric encryption system to encrypt the

symmetric key, what would this type of usage be known as?**A.** Combined system**B.** Asymmetric system**C.** Symmetric system**D.** Hybrid system**Answer: D****Explanation:**Because of the complexity of the underlying problems, most public-key algorithms involve operations such as modular multiplication and exponentiation, which are much more computationally expensive than the techniques used in most block ciphers, especially with typical key sizes. As a result, public-key cryptosystems are commonly "hybrid" systems, in which a fast symmetric-key encryption algorithm is used for the message itself, while the relevant symmetric key is sent with the message, but encrypted using a public-key algorithm. Similarly, hybrid signature schemes are often used, in which a cryptographic hash function is computed, and only the resulting hash is digitally signed.

NEW QUESTION: 3**CORRECT TEXT**Describe some feedback mechanisms that can help drive "relentless incrementalism":**Answer:** **Explanation:**1. Send out user surveys2.Use blind surveys3.Create a user group or committee4.Tap into exec committees for recommendations5.Use face-to-face interviews6.Use Sales force (Ideas, Pollzter, Click Tools).
