You must dream to get the AIF-C01 certificate.

**NEW QUESTION: 1**An organization wants to deploy cloud applications using block storage. The architect has included a hyperscale storage solution in the cloud design. Which requirements led to including this solution in the design?  
**A.** Organization wants to purchase a storage array  
Organization will use a spine/leaf topology to combine storage and application processing  
**B.** Organization does not want to purchase a storage array  
Organization wants to use a full mesh topology to combine storage and application processing  
**C.** Organization wants to purchase a storage array  
Organization will use a full mesh topology to combine storage and application processing  
**D.** Organization wants to purchase a storage array  
Organization wants to keep storage processing separate from the application processing  
**Answer: A**  
**Explanation:**When customers want converged/hyper-converged infrastructure appliances (or rack scale systems) - what customers ask for is this: They want a management and orchestration stack that spans the domains of compute/storage/virtualization (in appliances), and this extends to the top-of-rack network and spine/leaf network (in rack-scale systems that must scale to and beyond rack boundaries operationally). Note: Hyperscale storage is the storage of vast quantities of information in media capable of increasing in size rapidly, efficiently, and indefinitely. In a data center, hyperscale storage capacity commonly runs into the petabytes.
