NEW QUESTION: 3A. Option DB. Option BC. Option CD. Option A**Answer: C,D**Explanation:

ExplanationThe AWS Documentation mentions the followingBy default, AWS OpsWorks Stacks automatically installs the latest updates during setup, after an instance finishes booting. AWS OpsWorks Stacks does not automatically install updates after an instance is online, to avoid interruptions such as restarting application servers. Instead, you manage updates to your

online instances yourself, so you can minimize any disruptions. We recommend that you use one of the following to update your online instances. Create and start new instances to replace your current online instances. Then delete the current instances. The new instances will have the latest set of security patches installed during setup. On Linux-based instances in Chef 11.10 or older stacks, run the Update Dependencies stack command, which installs the current set of security patches and other updates on the specified instances.
