選んでください：**A.**

DynamoDBテーブルへの書き込み権限を持つIAMサービスロールを作成します。その役割をLambda関数に関連付けます。**Answer: D**  
Explanation:ExplanationThe ideal way is to create an IAM role which has the required permissions and then associate it with the Lambda function The AWS Documentation additionally mentions the following Each Lambda function has an IAM role (execution role) associated with it. You specify the IAM role when you create your Lambda function. Permissions you grant to this role determine what AWS Lambda can do when it assumes the role. There are two types of permissions that you grant to the IAM role:If your Lambda function code accesses other AWS resources, such as to read an object from an S3 bucket or write logs to CloudWatch Logs, you need to grant permissions for relevant Amazon S3 and CloudWatch actions to the role.If the event source is stream-based (Amazon Kinesis Data Streams and DynamoDB streams), AWS Lambda polls these streams on your behalf. AWS Lambda needs permissions to poll the stream and read new records on the stream so you need to grant the relevant permissions to this role.Option A is invalid because the VPC endpoint allows access instances in a private subnet to access DynamoDB Option B is invalid because resources policies are present for resources such as S3 and KMS, but not AWS Lambda Option C

is invalid because AWS Roles should be used and not IAM Users For more information on the Lambda permission model, please visit the below URL:  
<https://docs.aws.amazon.com/lambda/latest/dg/intro-permission-model.html> The correct answer is: Create an IAM service role with permissions to write to the DynamoDB table. Associate that role with the Lambda function. Submit your Feedback/Queries to our Exp
