**NEW QUESTION: 1**The advantages of eSpace UC and enterprise AD system integration solutions do not include: ( )**A.** User centralized storage and maintenance, which is conducive to authentication security and enterprise critical data security**B.** Provide secure routing protocols and anti-ARP attacks**C.** UC users access to AD for unified authentication and authentication**D.** UC import AD data, ensure that UC key information and AD database are synchronized, unified overhead household entrance**Answer: B**

**NEW QUESTION: 2**A technician is setting up a public guest network for visitors to access the Internet that must be separate from the corporate network. Which of the following are the BEST steps for the technician to take with minimum overhead configuration? (Choose two.)**A.** Configure visitor devices to use static IP addresses**B.** Enable two-factor authentication on visitor devices**C.** Configure the access point to use WPA2-AES encryption**D.** Enable SSID broadcasting to identify the guest network**E.** Ensure the access point is not running in mixed

mode**Answer: A,D**

**NEW QUESTION:** RMAN is connected to a target database instance and an auxiliary instance. You execute the command: What is the outcome?**A.** RMAN uses the push method to transfer image copies.**B.** RMAN uses the pull method to restore files using image copies.**C.** RMAN uses the push method to transfer backup sets.**D.** RMAN uses the pull method to restore files using backup sets.**Answer: D**Explanation:Explanation/Reference:Explanation:When RMAN performs active database duplication using backup sets, a connection is established with the source database and the auxiliary database. The auxiliary database then connects to the source database through Oracle Net Services and retrieves the required database files from the source database. This method of active database duplication is also to as the pull-based method. Example:DUPLICATE TARGET DATABASE TO dupdbFROM ACTIVE DATABASEPASSWORD FILE SPFILENOFILENAMECHECK;Incorrect Answers:A, B, D: When active database duplication is performed using image copies, after RMAN establishes a connection with the source database, the source database transfers the required database files to the auxiliary database. Using image copies may require additional resources on the source database. This method is referred to as the push-based method of active database duplication.References:<https://docs.oracle.com/database/121/BRADV/rcmdupdb.htm>
