NEW QUESTION: 1A. Option B. Option C. Option D. Option Answer: B

NEW QUESTION: 2Your network contains an Active Directory domain named contoso.com. Contoso.com contains a domain controller named DC1 and a read-only domain controller (RODC) named RODC1. You need to view the most recent user accounts authenticated by RODC1. What should you do first?
A. From Active Directory Users and Computers, right-click contoso.com, click Change Domain Controller, and then connect to RODC1.
B. From Active Directory Sites and Services, right-click the Connection object for DC2, and then click Replicate Now.
C. From Active Directory Users and Computers, right-click contoso.com, click Change Domain Controller, and then connect to DC1.
D. From Active Directory Sites and Services, right-click the Connection object for DC1, and then click Replicate Now.
Answer: C
Explanation: Reference:

http://technet.microsoft.com/en-us/library/rodc-guidance-for-administering-the-password-replication-policy.aspx#BKMK_Auth2
To view authenticated accounts using Active Directory Users and Computers
1. Open Active Directory Users and Computers. To open Active Directory Users and Computers, click Start. In Start Search, type dsa.msc, and then press ENTER.
2. Ensure that you are connected to a writable domain controller running Windows Server 2008 in the correct domain. To connect to the appropriate domain or domain controller, in the details pane, right-click the Active Directory Users and Computers object, and then click Change Domain or Change Domain Controller, respectively.
3. Click Domain Controllers.
4. In the details pane, right-click the RODC computer account, and then click Properties.
5. Click the Password Replication Policy tab.
6. Click Advanced.
7. In the drop-down list, click Accounts that have been authenticated to this Read-only Domain Controller, as shown in the following illustration.

NEW QUESTION: 3You create a Visual Studio project named ProductUpdates. You must update data in a table named ProductTable. You must be able to run the code from Visual Studio. You need to create an X++ class. Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
Answer: Explanation: Explanation:
Step 1: Create a runnable class and add it to the ProductUpdates project.
Step 2: Create a class extension of the ProductTable and add it to the ProductUpdates project.
Step 3: Write database manipulation code in the class
Step 4: Build and run the class.
Step 5: Set the class as the startup project.
