**NEW QUESTION: 3****A.** Option A  
**B.** Option C  
**C.** Option B  
**D.** Option D  
**Answer: B**  
Explanation: The developer must deploy the public key with their application so that, when Windows Azure spins up role instances, it will match up the thumbprint in the service definition with the uploaded service certificate and deploy the private key to the role instance. The private key is intentionally non-exportable to the .pfx format, so you won't be able to grab the private key through an RDC connection into a role instance.
