NEW QUESTION: 1 Create a file called mysecret.yml on the control host using ansible vault in home/bob/ansible. Set the password to 'notasafepass' and inside the file create a variable called dev_pass with the value of devops. Save the file. Then go back in the file and change dev_pass value to devops123. Then change the vault password of mysecret.yml to verysafepass
Answer: Explanation: See the Explanation for complete Solution below. Explanation
ansible-vault create lock.yml
New Vault Password: reallysafepw
Confirm: reallysafepw

NEW QUESTION: 2 You plan to create a project in Azure DevOps. Multiple developers will work on the project. The developers will work offline frequently and will require access to the full project history while they are offline. Which version control solution should you use?
A. Team Foundation Version Control
B. Subversion
C. Git
D. TortoiseSVN
Answer: C
Explanation: Git history: File history is replicated on the client dev machine and can be viewed even when not connected to the server. You can view history in Visual Studio and on the web portal.
Note: Azure Repos supports two types of version control: Git and Team Foundation Version Control (TFVC).
Reference:
<https://docs.microsoft.com/en-us/azure/devops/repos/tfvc/comparison-git-tfvc>

NEW QUESTION: 3 How can an administrator set up a default root password for Red Hat Linux installations using Server Deployment?
A. Customize the PXE configuration file
B. Deploy the DAgent configuration job
C. Customize the kickstart file
D. Deploy the ProLiant configuration job
Answer: C
Explanation:
<http://bizsupport1.austin.hp.com/bc/docs/support/SupportManual/c02048553/c02048553.pdf>

pageThe root password is password. This password is stored as clear text in the kickstart/control file. HP recommends changing the default root password.
