NEW QUESTION: 1 **Answer:** Explanation:Explanation:Since SQL Server 2008 you can also control how SQL Server performs the Lock Escalation - through the ALTER TABLE statement and the property LOCK_ESCALATION. There are 3 different options available: Box 1: Table 1, Auto The default option is TABLE, means that SQL Server *always* performs the Lock Escalation to the table level -even when the table is partitioned. If you have your table partitioned, and you want to have a Partition Level Lock Escalation (because you have tested your data access pattern, and you don't cause deadlocks with it), then you can change the option to AUTO. AUTO means that the Lock Escalation is performed to the partition level, if the table is partitioned, and otherwise to the table level. Box 2: Table 2, DISABLE With the option DISABLE you can completely disable the Lock Escalation for that specific table. For partitioned tables, use the LOCK_ESCALATION option of ALTER TABLE to escalate locks to the HoBT level instead of the table or to disable lock escalation. References:

NEW QUESTION: 3 What does "System Integrity" mean? **A.** Hardware and firmware have undergone periodic testing to verify that they are functioning properly. **B.** Design specifications have been verified against the formal top-level specification. **C.** Users can't tamper with processes they do not own. **D.** The software of the system has been implemented as designed.

Answer: A Explanation:Explanation/Reference: System Integrity means that all components of the system cannot be tampered with by unauthorized personnel and can be verified that they work properly. The following answers are incorrect: The software of the system has been implemented as designed. Is incorrect because this would fall under Trusted system

distribution. Users can't tamper with processes they do not own. Is incorrect because this would fall under Configuration Management. Design specifications have been verified against the formal top-level specification. Is incorrect because this would fall under Specification and verification.
