network. When you configure ip default-network the router considers routes to that network for installation as the gateway of last resort on the router.For every network configured with ip default-network, if a router has a route to that network, that route is flagged as a candidate default route. However, in this case if the router does not a route to the drfault network of 172.16.199.9, then you would need to ensure that this route exists by creating a static route to 172.16.199.0 using the address of the next hop router, or simply create a default route using the address of the next hop router.
