NEW QUESTION: 1 Refer to the exhibit. An engineer is trying to redistribute OSPF to BGP, but not all of the routes are redistributed. What is the reason for this issue?
A. By default, only internal OSPF routes are redistributed into BGP
B. By default, only internal routes and external type 1 routes are redistributed into BGP
C. Only classful networks are redistributed from OSPF to BGP
D. BGP convergence is slow, so the route will eventually be present in the BGP table

Answer: B

NEW QUESTION: 2 You need to prepare the environment to ensure that the web administrators can deploy the web apps as quickly as possible. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
Answer: Explanation: Scenario: Web administrators will deploy Azure web apps for the marketing department. Each web app will be added to a separate resource group. The initial configuration of the web apps will be identical. The web administrators have permission to deploy web apps to resource groups.

NEW QUESTION: 3 A. Option B B. Option A C. Option D D. Option C
Answer: A, D Explanation: B: There are two ways to map your custom domain to a CDN endpoint.
1 . Create a CNAME record with your domain registrar and map your custom domain and subdomain to the CDN endpoint
2 . Add an intermediate registration step with Azure cdn verify
C: The Azure Content Delivery Network (CDN) offers developers a global solution for delivering high-bandwidth content by caching blobs and static content of compute instances at physical nodes in the United States, Europe, Asia, Australia and South America. The benefits of using CDN to cache Azure data include:
/ Better performance and user experience for end users who are far from a content source, and are using applications where many 'internet trips' are required to load content/
/ Large distributed scale to better handle instantaneous high load, say, at the start of an event such as a product launch

NEW QUESTION: 4 You have an Azure web app named App1 that contains the following autoscale conditions. The default auto created scale condition has a scale mode that has Scale

to a specific instance count set to 2. Scale condition 1 has the following configurations: * Scale mode: Scale to a specific instance count * Instance count 3 * Schedule: Specify start/end dates * Start date: August 1, 2019, 06:00 * End date: September 1, 2019, 18:00 Scale condition 2 has the following configurations: * Scale mode: Scale to a specific instance count * Instance count 4 * Schedule: Repeat specific days * Repeat every: Monday * Start time: 06:00 * End time: 18:00 Scale condition 3 has the following configurations. **Answer:** Explanation: Explanation Box 1: 5 Scale condition 1, Scale condition 2, and Scale condition 3 applies. Scale condition 3 takes precedence as it the largest increase in the number of instances. Box 2: 5 Scale condition 1 does not apply as its end date is exceeded. Scale condition 2 and Scale condition 3 applies. Scale condition 3 takes precedence as it the largest increase in the number of instances. When you configure multiple policies and rules, they could conflict with each other. Autoscale uses the following conflict resolution rules to ensure that there is always a sufficient number of instances running: * Scale-out operations always take precedence over scale-in operations. * When scale-out operations conflict, the rule that initiates the largest increase in the number of instances takes precedence. * When scale in operations conflict, the rule that initiates the smallest decrease in the number of instances takes precedence.
