The diverse choice is a great convenience for customers, Therefore, it is very important to clear the exam in the first attempt, Estruturit is the best provider with high pass rate in JN0-105 exam dumps.

We promise you 100% pass rate.

NEW QUESTION: 1Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2016. The servers have the same hardware configuration. You need to asynchronously replicate volume F: from Server1 to Server2. What should you do?
A. Run Set-DfsrServiceConfiguration and specify the -RPCPort parameter.
B. Install the Failover Clustering feature and use Cluster Shared Volumes (CSV).
C. Run New-SRPartnership and specify the -ReplicationMode parameter.
D. Install the Failover Clustering feature and create a new cluster resource group.
Answer: C
Explanation: Explanation/Reference: Explanation: -ReplicationMode Specifies the desired mode of replication for this source and destination pair. The acceptable values for this parameter are: Synchronous or 1. The synchronous mode requires all writes to commit on the destination server and on the source server, which guarantees data integrity between computers. Asynchronous or 2. The asynchronous mode writes to the source server without waiting for the destination server, which allows for replication over high latency, geographic networks. The default value is synchronous. The default asynchronous recovery point alert time is 5 minutes. You can modify it by using the SetSRPartnership cmdlet. The alert time has no effect on replication behavior, only on reporting. NEW QUESTION: 2What is the Extensible Markup Language (XML)?
A. a language used by printers to draw objects
B. a markup language that defines rules for encoding documents for humans and machines to read
C. a language used to reproduce print jobs as link or toner on paper or other media
D. a machine language that software developers use to create software
Answer: B

NEW QUESTION: 3Which command is used to add users to or from existing roles?
A. Add user <User Name>
B. Add rba user <User Name>
C. Add rba user <User Name> roles <List>
D. Add user <User Name> roles <List>
Answer: C
Explanation: Explanation Configuring Roles - CLI (rba)

NEW QUESTION: 4The Information Security Officer (ISO) is reviewing a summary of the findings from the last COOP tabletop exercise. The Chief Information Officer (CIO) wants to determine which additional controls must be implemented to reduce the risk of an extended customer service outage due to the VoIP system being unavailable. Which of the following BEST describes the scenario presented and the document the ISO is reviewing?
A. The ISO is assessing the effect of a simulated downtime involving the telecommunication system within the AAR.
B. The ISO is evaluating the business implications of a recent telephone system failure within the BIA.
C. The ISO is investigating the impact of a possible downtime of the messaging system within the RA.
D. The ISO is calculating the budget adjustment needed to ensure audio/video system

redundancy within the RFQ.**Answer: A**Explanation:VoIP is an integral part of network design and in particular remote access, that enables customers accessing and communicating with the company. If VoIP is unavailable then the company is in a situation that can be compared to downtime. And since the ISO is reviewing the summary of findings from the last COOP tabletop exercise, it can be said that the ISO is assessing the effect of a simulated downtime within the AAR.
