They are 100 percent guaranteed 820-605 learning quiz.

NEW QUESTION: 1You manage a database that includes the tables shown in the exhibit (Click the Exhibit button.)You plan to create a DML trigger that reads the value of the LineTotal column for each row in the PurchaseOrderDetail table. The trigger must add the value obtained to the value in the SubTotal column of the PurchaseOrderHeader table.You need to organize the list to form the appropriate Transact-SQL statement.Which five Transact-SQL segments should you use to develop the solution? To answer, move the appropriate Transact-SQL segments from the list of Transact-SQL segments to the answer area and arrange them in the correct order.**Answer:** Explanation:

NEW QUESTION: 2Measurement of variation in health care and its application to quality improvement must begin with the identification and articulation of (Choose two):**A.** Understanding true variation versus artifact or statistical error**B.** Assignable variation**C.** What is to be measured?**D.** The standard against which is to be compared a process based on extensive research, trial and error and collaborative discussion**Answer: B,D**

NEW QUESTION: 3A company has the following Microsoft SQL Server instances Instance1 and Instance2. You plan to enable Always Encrypted for both instances.You need to configure the instances to meet the following requirements.* Instance1 must use an initialization vector that is different each time the instance is initiated.* Instance2 must use an initialization vector that is derived from an algorithm.In the table below, identify the encryption type that must be used for each instance.NOTE: Make only one selection in each column. Each correct selection is worth one point.**Answer:** Explanation:ExplanationAlways Encrypted supports two types of encryption: randomized encryption and deterministic encryption.* Randomized encryption uses a method that encrypts data in a less predictable manner. Randomized encryption is more secure, but prevents searching, grouping, indexing, and joining on encrypted columns.* Deterministic encryption always generates the same encrypted value for any given plain text value.Using deterministic encryption allows point lookups, equality joins, grouping and indexing on encrypted columns. However, but may also allow unauthorized users to guess information about encrypted values by examining patterns in the encrypted column, especially if there is a small set of possible encrypted values, such as True/False, or North/South/East/West region.References:
