**NEW QUESTION: 1**Which stakeholder is responsible for managing related projects in a coordinated way?**A.** Portfolio manager**B.** Program manager**C.** Sponsor**D.** Project manager  
**Answer: B**

**NEW QUESTION: 2**You are designing a virtual network to support a web application. The web application uses Blob storage to store large images. The web application will be deployed to an Azure App Service Web App.You have the following requirements:  
\* Secure all communications by using Secured Sockets Layer (SSL).  
\* SSL encryption and decryption must be processed efficiently to support high traffic load on the web application.  
\* Protect the web application from web vulnerabilities and attacks without modification to backend code.  
\* Optimize web application responsiveness and reliability by routing HTTP request and responses to the endpoint with the lowest network latency for the client.You need to configure the Azure components to meet the requirements.What should you do? To answer, select the appropriate options in the answer area.**NOTE:** Each correct selection is worth one point.**Answer:**  
Explanation:ExplanationBox 1: Azure Application GatewayApplication gateway supports SSL termination at the gateway, after which traffic typically flows unencrypted to the backend servers. This feature allows web servers to be unburdened from costly encryption and decryption overhead. However, sometimes unencrypted communication to the servers is not an acceptable option. This could be due to security requirements, compliance requirements, or the application may only accept a secure connection. For such applications, application gateway supports end to end SSL encryption.Box 2: Azure Security CenterAzure Security Center provides unified security management and advanced threat protection across hybrid cloud workloads. With Security Center, you can apply security policies across your workloads, limit your exposure to threats, and detect and respond to attacks.Box 3: Azure Traffic ManagerMicrosoft Azure Traffic Manager allows you to control the distribution of user traffic for service

endpoints in different datacenters. Service endpoints supported by Traffic Manager include Azure VMs, Web Apps, and cloud services.

**NEW QUESTION: 3** Which option would you consider first to decrease the wait event immediately? **A.** Option **C**. Option **D**. Option **E**. Option **A**  
**Answer: B**  
**Explanation:**  
Explanation\* Automatic segment space management (ASSM) is a simpler and more efficient way of managing space within a segment. It completely eliminates any need to specify and tune the pctused, freelists, and freelist groups storage parameters for schema objects created in the tablespace. If any of these attributes are specified, they are ignored.\* Oracle introduced Automatic Segment Storage Management (ASSM) as a replacement for traditional freelists management which used one-way linked-lists to manage free blocks with tables and indexes. ASSM is commonly called "bitmap freelists" because that is how Oracle implement the internal data structures for free block management.Note:\* Buffer busy waits are most commonly associated with segment header contention outside the data buffer pool (db\_cache\_size, etc.).\* The most common remedies for high buffer busy waits include database writer (DBWR) contention tuning, adding freelists (or ASSM), and adding missing indexes.
