<https://technet.microsoft.com/en-us/mt227395.aspx> Topic 2, Contoso, Ltd Overview Contoso, Ltd. is a consulting company that has a main office in Montreal and two branch offices in Seattle and New York. Contoso has IT, human resources (HR), and finance departments. Contoso recently opened a new branch office in San Diego. All the users in the San Diego office work from home. Existing environment Contoso uses Microsoft 365. The on-premises network contains an Active Directory domain named contoso.com. The domain is synced to Microsoft Azure Active Directory (Azure AD). All computers run Windows 10 Enterprise. You have four computers named Computer1, Computer2, Computer3, and ComputerA. ComputerA is in a workgroup on an isolated network segment and runs the Long Term Servicing Channel version of Windows 10. ComputerA connects to a manufacturing system and is business critical. All the other computers are joined to the domain and run the Semi-Annual Channel version of Windows 10. In the domain, you create four groups named Group1, Group2, Group3, and Group4. Computer2 has the local Group Policy settings shown in the following table. The computers are updated by using Windows Update for Business. The domain has the users shown in the following table. Computer1 has the local users shown in the following table. Requirements Planned Changes Contoso plans to purchase computers preinstalled with Windows 10 Pro for all the San Diego office users. Technical requirements Contoso identifies the following technical requirements: \* The computers in the San Diego office must be upgraded automatically to Windows 10 Enterprise and must be joined to Azure AD the first time a user starts each new computer. End users must not be required to accept the End User License

Agreement (EULA). \* Helpdesk users must be able to troubleshoot Group Policy object (GPO) processing on the Windows 10 computers. The helpdesk users must be able to identify which Group Policies are applied to the computers. \* Users in the HR department must be able to view the list of files in a folder named D:Reports on Computer3. \* ComputerA must be configured to have an Encrypting File System (EFS) recovery agent. \* Quality update installations must be deferred as long as possible on ComputerA. \* Users in the IT department must use dynamic look on their primary device. \* User6 must be able to connect to Computer2 by using Remote Desktop. \* The principle of least privilege must be used whenever possible. \* Administrative effort must be minimized whenever possible. \* Assigned access must be configured on Computer1.

**NEW QUESTION: 2** After you configure the ip dns spoofing command globally on a device, under which two conditions is DNS spoofing enabled on the device? (Choose two.)  
**A.** The ip dns spoofing command addresses are removed  
**B.** The ip host command is disabled  
**C.** The no ip domain lookup command is configured  
**D.** All configured IP name server addresses are removed  
**E.** The DNS server queue limit is disabled  
**Answer: C, D**  
**Explanation:** Explanation/Reference: Explanation: DNS spoofing is designed to allow a router to act as a proxy DNS server and "spoo" replies to any DNS queries using either the configured IP address in the ip dns spoofing ip-address command or the IP address of the incoming interface for the query. This feature is useful for devices where the interface toward the Internet service provider (ISP) is not up. Once the interface to the ISP is up, the router forwards DNS queries to the real DNS servers. This feature turns on DNS spoofing and is functional if any of the following conditions are true: The no ip domain lookup command is configured. IP name server addresses are not configured. There are no valid interfaces or routes for sending to the configured name server addresses.
