NEW QUESTION: 1Which of the following describes the MAIN difference between a plenum rated cable versus a non-plenum rated cable?**A.** A reduced production of hazardous fumes when subjected to fire**B.** The ability to transmit data with fewer cross-talk interruptions**C.** The ability to be bent into tighter turning radiuses within conduit**D.** A reduced noise level when bundled in groups of 20 or more**Answer: A**

NEW QUESTION: 2**A.** Option DB. Option FC. Option HD. Option BE. Option CF. Option GG. Option AH. Option E**Answer: E,F,H****Explanation:**C: Immutable Zones provide read-only file system profiles for solaris non-global zones.Note that ip-type: exclusive:Starting with OpenSolaris build 37 and Oracle Solaris 10 8/07, a default zone can be configured as an "exclusive-IP zone" which gives it exclusive access to the NIC(s) that the zone has been assigned. Applications in such a zone can communicate directly with the NIC(s) available to the zone.Note on zones:After installing Oracle Solaris on a system, but before creating any zones, all processes run in the global zone. After you create a zone, it has processes that are associated with that zone and no other zone. Any process created by a process in a non-global zone is also associated with that non-global zone.Any zone which is not the global zone is called a non-global zone. Most people call non- global zones simply "zones." Some people call them "local zones" but this is discouraged.The default native zone file system model on Oracle Solaris 10 is called "sparse-root." This model emphasizes efficiency and security at the cost of some configuration flexibility.Sparse-root zones optimize physical memory and disk space usage by sharing some directories, like /usr and /lib. Sparse-root zones have their own private file areas for directories like /etc and /var. Whole-root zones increase configuration flexibility but increase resource usage. They do not use shared file systems for /usr, /lib, and a few others. There is no supported way to convert an existing sparse-root zone to a whole-root zone. Creating a new zone is required.
