NEW QUESTION: 3 HOTSPOT
Your network contains one Active Directory forest named contoso.com and one Active Directory forest named adatum.com. Each forest contains a single domain. You have the domain controllers configured as shown in the following table.---You perform the following three actions: Create a user named User1 on DC3. It contains the domains public files that need to be accessed by clients and kept synchronised between domain controllers. Here File1.txt will be stored on both domain controllers in contoso.com (DC1 and DC2). * User1 will be stored on both domain controllers in adatum.com (DC3 and DC4), and on the global catalog server in contoso.com (DC1). * The global catalog is the set of all objects in an Active Directory Domain Services (AD DS) forest. A global catalog server is a domain controller that stores a full copy of all objects in the directory for its host domain and a partial, read-only copy of all objects for all other domains in the forest.
