NEW QUESTION: 1 A company wants to create an application that will transmit protected health information (PHI) to thousands of service consumers in different AWS accounts. The application servers will sit in private VPC subnets. The routing for the application must be fault tolerant. What should be done to meet these requirements? **A.** Create a virtual private gateway connection between each pair of service provider VPCs and service consumer VPCs. **B.** Create an internal Application Load Balancer in the service provider VPC and put application servers behind it. **C.** Create a proxy server in the service provider VPC to route requests from service consumers to the application servers. **D.** Create a VPC endpoint service and grant permissions to specific service consumers to create a connection. **Answer: D** Explanation: Explanation <https://docs.aws.amazon.com/vpc/latest/userguide/endpoint-service.html> "You can create your own application in your VPC and configure it as an AWS PrivateLink-powered service (referred to as an endpoint service). Other AWS principals can create a connection from their VPC to your endpoint service using an interface VPC endpoint. You are the service provider, and the AWS principals that create connections to your service are service consumers."

NEW QUESTION: 2 Based on this interface configuration, what is the expected state of OSPF adjacency? **A.** 2WAY/DROTHER on both routers **B.** not established **C.** Full on both routers **D.** FULL/BDR on R1 and FULL/BDR on R2 **Answer: B**
