NEW QUESTION: 1A. Option AB. Option BC. Option CD. Option DAnswer: CExplanation: The question states that coauthoring of documents in the library is required. Coauthoring means the ability of multiple people to be able to edit a document simultaneously. One way to control document collaboration is to require check-out of files, especially when multiple users have access to the library. If you have a file checked out, you can be sure that other people cannot overwrite it. However, you are also preventing other people from seeing the latest changes or making changes themselves. Do not configure your library to require checkout if people plan to co-author documents in the library. People cannot work simultaneously on documents when required check-out is turned on.
