With our heartfelt wishes for you to successfully pass the WGU Web Development Applications test engine, we recommend the professional Web-Development-Applications actual exam for you, Besides, our Web-Development-Applications training materials are verified by the skilled professionals, and the accuracy and the quality can be guaranteed.

Once you decide to buy Web-Development-Applications valid vce from our website, you will be allowed to free update your Web-Development-Applications valid dumps one-year, If you satisfied, you can add Web-Development-Applications exam dumps to your shopping cart.

You can review it later and can improve your preparation.

NEW QUESTION: 1A. Option AB. Option DC. Option CD. Option BAnswer: A

NEW QUESTION: 2You want to install SAP Web Dispatcher for your system. Your SAP Web Dispatcher should run in demilitarized zone (DMZ). Which of the following statements are true about ports on the internal DMZfirewall? Note: There are 2 correct answers to this question.**A.** In an AS Java scenario you must open the Java dispatcher port.**B.** In an AS Java scenario you must open the ICM (Internet Communication Manager) port.**C.** In an AS ABAP+Java scenario you must open the ICM port.**D.** In an AS ABAP scenario you must open the ABAP dispatcher port.**E.** In an AS ABAP+Java scenario you must open the Java and the ABAP Dispatcher port.
Answer: A,C

NEW QUESTION: 3A. Option CB. Option AC. Option ED. Option DE. Option BAnswer: A,B,D
Explanation:Use the CREATE PLUGGABLE DATABASE statement to create a pluggable database (PDB).This statement enables you to perform the following tasks:*(A) Create a PDB by using the seed as a templateUse the create_pdb_from_seed clause to create a PDB by using the seed in the multitenant container database (CDB) as a template. The files associated with the seed are copied to a new location and the copied files are then associated with the new PDB.* (C) Create a PDB by cloning an existing PDBUse the create_pdb_clone clause to create a PDB by copying an existing PDB (the source PDB) and then plugging the copy into the CDB. The files associated with the source PDB are copied to a new location and the copied files are associated with the new PDB. This operation is called cloning a PDB.The source PDB can be plugged in or unplugged. If plugged in, then the source PDB can be in the same CDB or in a remote CDB. If the source PDB is in a remote CDB, then a database link is used to connect to the remote CDB and copy the files.* Create a PDB by plugging an unplugged PDB or a non-CDB into a CDBUse the create_pdb_from_xml clause to plug an unplugged PDB or a non-CDB into a CDB, using an XML metadata file.
