If you are still looking for valid [Latest ISO-IEC-27001-Lead-Auditor Exam Simulator](#) exam preparation materials for pass exams, it is your chance now.

NEW QUESTION: 1Your network contains an Active Directory domain named adatum.com. The domain contains a server named Server1 that runs Windows Server 2012. Server1 is configured as a Network Policy Server (NPS) server and as a DHCP server. The network contains two subnets named Subnet1 and Subnet2. Server1 has a DHCP scope for each subnet. You need to ensure that noncompliant computers on Subnet1 receive different network policies than noncompliant computers on Subnet2. Which two settings should you configure? (Each correct answer presents part of the solution. Choose two.)
A. The NAS Port Type constraints
B. The Health Policies conditions
C. The Called Station ID constraints
D. The MS-Service Class conditions
E. The NAP-Capable Computers conditions
Answer: D, E
Explanation: The MS-Service Class is how you can specify which subnet the computer must be coming from in order to apply the policy.

NEW QUESTION: 2Which of the following is the MOST useful feedback for the curriculum in course evaluations? (Select TWO).
A. Did the flow of the course follow the objectives?
B. Was it easy for the instructor to stay on topic?
C. Where you satisfied with the course extra course material for independent study?
D. What material would you add to the course?
E. Is the Instructor qualified to teach the material?
Answer: A, D
Explanation: Explanation/Reference: Explanation:

NEW QUESTION: 3A company is using CloudTrail to log all AWS API activity for all regions in all of its accounts. The CISO has asked that additional steps be taken to protect the integrity of the log files. What combination of steps will protect the log files from intentional or unintentional alteration? Choose 2 answers from the options given below. Please select:
A. Use Systems Manager Configuration Compliance to continually monitor the access policies of S3 buckets containing Cloud Trail logs.
B. Create an S3 bucket in a dedicated log account and grant the other accounts write only access. Deliver all log files from every account to this S3 bucket.
C. Create a Security Group that blocks all traffic except calls from the CloudTrail service. Associate

the security group with) all the Cloud Trail destination S3 buckets.**D.** Enable CloudTrail log file integrity validation**E.** Write a Lambda function that queries the Trusted Advisor Cloud Trail checks. Run the function every 10 minutes.**Answer: B,D**Explanation:ExplanationThe AWS Documentation mentions the followingTo determine whether a log file was modified, deleted, or unchanged after CloudTrail delivered it you can use CloudTrail log file integrity validation. This feature is built using industry standard algorithms: SHA-256 for hashing and SHA-256 with RSA for digital signing. This makes it computationally infeasible to modify, delete or forge CloudTrail log files without detection.Option B is invalid because there is no such thing as Trusted Advisor Cloud Trail checks Option D is invalid because Systems Manager cannot be used for this purpose.Option E is invalid because Security Groups cannot be used to block calls from other services For more information on Cloudtrail log file validation, please visit the below URL:

<https://docs.aws.amazon.com/awsccloudtrail/latest/userguide/cloudtrail-loe-file-validation-intro.html> For more information on delivering Cloudtrail logs from multiple accounts, please visit the below URL:

<https://docs.aws.amazon.com/awsccloudtrail/latest/userguide/cloudtrail-receive-logs-from-multiple-accounts.html> The correct answers are: Create an S3 bucket in a dedicated log account and grant the other accounts write only access. Deliver all log files from every account to this S3 bucket, Enable Cloud Trail log file integrity validation Submit your Feedback/Queries to our Experts
