Explanation:This command consists of multiple make commands on the same line:The first part of the command, make dep, actually takes your configuration and builds the corresponding dependency tree. This process determines what gets compiled and what doesn't.The next step, make clean, erase all previous traces of a compilation so as to avoid any mistakes in which version of a feature gets tied into the kernel.The next step, make bzImage does the full compilation of the kernel.The next two steps, make modules and make modules_install will compile the modules and copy them to their appropriate location.
