NEW QUESTION: 1When a partner establishes a support department, what SAP Business One environments must be installed?There are 2 correct answers to this question.Response:**A.** All major versions used by your customers**B.** All hardware platforms in use at your customers' sites**C.** All patches for the current version**D.** All major versions of SAP Business One**E.** All localizations used by your customers**Answer: A,E**

NEW QUESTION: 2Which items are HP Web Jetadmin discovery methods? (Choose three.)**A.** Active Directory discovery**B.** MFP node discovery**C.** IP range discovery**D.** TCP/IP address discovery**E.** IP broadcast discovery**F.** XML discovery**Answer: A,C,D**Explanation: Explanation/Reference:References: <http://h10032.www1.hp.com/ctg/Manual/c01840707> Page: 4

NEW QUESTION: 3How often should an independent review of the security controls be performed, according to OMB Circular A-130?**A.** Every five years**B.** Every three years**C.** Never**D.** Every year**Answer: B**Explanation:The correct answer is "Every three years". OMB Circular A-130 requires that a review of the security controls for each major government application be performed at least every three years. For general support systems, OMB Circular A-130 requires that the security controls be reviewed either by an independent audit or self review. Audits can be selfadministered or independent (either internal or external). The essential difference between a self-audit and an independent audit is objectivity; however, some systems may require a fully independent review. Source: Office of Management and Budget Circular A-130, revised November 30, 2000 .

NEW QUESTION: 4A user is running a batch process on EBS backed EC2 instances. The batch process starts a few instances to process hadoop Map reduce jobs which can run between 50 - 600 minutes or sometimes for more time. The user wants to configure that the instance gets terminated only when the process is completed. How can the user configure this with CloudWatch?**A.** Setup the CloudWatch with Auto Scaling to terminate all the instances**B.** Setup a job which terminates all instances after 600 minutes**C.** Setup the CloudWatch action to terminate the instance when the CPU utilization is less than 5%**D.** It is not possible to terminate instances automatically**Answer: D**Explanation:ExplanationAmazon CloudWatch alarm watches a single metric over a time period that the user specifies and performs one or more actions based on the value of the metric relative to a given threshold over a number of time periods. The user can setup an action which terminates the instances when their CPU utilization is below a certain threshold for a certain period of time. The EC2 action can either terminate or stop the instance as part of the EC2 action.
