Select Estruturit C-C4H51-2405 exam material, so that you do not need yo waste your money and effort, A Solid Solution to Glorious Success in the C-C4H51-2405 Exam!

**NEW QUESTION: 1** A. Option C B. Option A C. Option D D. Option B **Answer: B, C** Explanation: Version 3 of the Network I/O Control feature offers improved network resource reservation and allocation across the entire switch. Models for Bandwidth Resource Reservation Network I/O Control version 3 supports separate models for resource management of system traffic related to infrastructure services, such as vSphere Fault Tolerance, and of virtual machines. The two traffic categories have different nature. System traffic is strictly associated with an ESXi host. The network traffic routes change when you migrate a virtual machine across the environment. To provide network resources to a virtual machine regardless of its host, in Network I/O Control you can configure resource allocation for virtual machines that is valid in the scope of the entire distributed switch. Bandwidth Guarantee to Virtual Machines Network I/O Control version 3 provisions bandwidth to the network adapters of virtual machines by using constructs of shares, reservation and limit. Based on these constructs, to receive sufficient bandwidth, virtualized workloads can rely on admission control in vSphere Distributed Switch, vSphere DRS and vSphere HA

**NEW QUESTION: 2** Which three can be automated with EPM Automate? (Choose three.) A. Migrate a backup between test and production B. Import a file into the ePBCS's inbox C. Send an email to users D. Run a Business Rule E. Import user security **Answer: A, B, D** Explanation: Explanation/Reference: EPM Automate Utility enables Service Administrators to automate many repeatable tasks including the following: Run business rules on data, and refresh the application Import and export metadata, data, artifact and application snapshots, templates, and Data Management mappings Copy data from one database to another; typically, from a block storage database to an aggregate storage database or from a block storage database to another block storage database References: [https://docs.oracle.com/cloud/latest/epm-common/CEPMA/using\\_epmctl.htm#CEPMA-using\\_pbcs\\_book\\_2570](https://docs.oracle.com/cloud/latest/epm-common/CEPMA/using_epmctl.htm#CEPMA-using_pbcs_book_2570)

**NEW QUESTION: 3** You need to configure session storage in the web.config file to meet the technical requirements for scalability. Which SessionState mode should you use? (Each correct answer presents a complete solution. Choose all that apply.) A. InProc B. SqlServer C. AutoDetect D. StateServer **Answer: B, D** Explanation: Explanation/Reference: Explanation: ASP.NET session state supports several different storage options for session data. Each option is identified by a value in the SessionStateMode enumeration. The following list describes the available session state modes: StateServer mode, which stores session state in a separate process called the ASP.NET state service. This ensures that session state is preserved if the Web application is restarted and also makes session state available to multiple Web servers in a Web farm. SQLServer mode stores session state in a SQL Server database. This ensures that session state is preserved if the Web application is restarted and also makes session state available to multiple Web servers in a Web farm. InProc mode, which stores session state in memory on the Web server. This is the default. Custom mode, which enables you to specify a custom storage provider. Off mode, which disables session state.
