But if they don't have excellent abilities and good major knowledge they are hard to find a decent job, Besides 350-501 study materials are famous for high-quality.

There are three versions of 350-501 test questions: Implementing and Operating Cisco Service Provider Network Core Technologies for now with high accuracy and high quality.

NEW QUESTION: 1 Refer to the exhibit. Which two statements can be derived from the output of the show standby command? (Choose two.)
A. R2 is using the default HSRP hello and hold timers.
B. If Fa0/0 is shut down, the HSRP priority on R2 becomes 80.
C. Router with IP 10.10.1.3 is active because it has a higher IP address.
D. R2 becomes the active router after the hold time expires.
E. R2 Fa0/0 regains mastership when the link comes back up.
Answer: A,B

NEW QUESTION: 2 What feature is not available for optimized connections when using Port or Full transparency over the WAN?
A. Path Selection
B. Top Talkers report
C. Quality of Service marking
D. VLAN segregation
E. Connection Pooling
Answer: E
Explanation: Explanation Correct addressing, the opposite of transparent Addressing which includes Port or Full transparency, enables you to use the connection pooling optimization feature. Connection pooling works only for connections optimized using correct addressing. Connection pooling enables Steelhead appliances to create several TCP connections between each other before they are needed. When transparent addressing is enabled, Steelhead appliances cannot create the TCP connections in advance because they cannot detect what types of client and server IP addresses and ports are needed.

NEW QUESTION: 3 You are configuring failover clustering. You need to install multipath support on the servers. What should you do?
A. Run the mpiocpl.exe command.
B. Run the Dism /online /enable-feature: MultipathIo command.
C. Run the mpclaim.exe command.
D. Run the ocsetup /w MultipathIo command.
Answer: D
Explanation: To install MPIO on Server core on Windows Server 2008 run this command from a command prompt "ocsetup MultipathIo /norestart" and then run " mpclaim -r -i -a "" This command Installs the Microsoft MPIO Optional Component on non Server Core installations and then sets the Microsoft MPIO DSM (MSDSM) to claim all

unclaimed Microsoft MPIO devices in the system. MPCLAIM Command Line Reference: Usage: mpclaim reboot_option install_switch device_switch device_hwid(s) reboot_option Whether to automatically reboot or not -r automatically reboot without prompting -n suppress reboot request (CALLER IS EXPECTED TO REBOOT) install_switch Whether to add or remove MPIO support -i install MPIO optional component and add multipath support for device -u remove multipath support for device and uninstall MPIO OC if no remaining devices are configured for MPIO device_switch Whether to apply above options to all devices or passed-in devices -d following parameters indicate hardware ids of devices -a work on all applicable devices -c work on only all SPC3-compliant devices (meaningful only in the context of install. If used with '-u', it is treated as '-a') device_hwid HardwareIDs of Devices to be MPIO'd, as strings of vendor8product16, delimited by a space (Note: Use empty string with '-a' option) <http://blogs.msdn.com/b/san/archive/2008/07/27/microsoft-mpio-command-line-reference-mpclaim-and-server-core-configuration.aspx> Wrong answer: Enable MPIO --> Dism /online /enable-feature:Multipath Important When using DISM to enable or disable features, the feature name is case-sensitive. [http://technet.microsoft.com/en-us/library/ee619752\(v=WS.10\).aspx](http://technet.microsoft.com/en-us/library/ee619752(v=WS.10).aspx)

NEW QUESTION: 4 Drag and drop the LISP components from the left onto the function they perform on the right. Not all options are used. **Answer:** Explanation: Explanation+ accepts LISP encapsulated map requests: LISP map resolver+ learns of EID prefix mapping entries from an ETR: LISP map server+ receives traffic from LISP sites and sends it to non-LISP sites: LISP proxy ETR+ receives packets from site-facing interfaces: LISP ITR Explanation ITR is the function that maps the destination EID to a destination RLOC and then encapsulates the original packet with an additional header that has the source IP address of the ITR RLOC and the destination IP address of the RLOC of an Egress Tunnel Router (ETR). After the encapsulation, the original packet become a LISP packet. ETR is the function that receives LISP encapsulated packets, decapsulates them and forwards to its local EIDs. This function also requires EID-to-RLOC mappings so we need to point out an "map-server" IP address and the key (password) for authentication. A LISP proxy ETR (PETR) implements ETR functions on behalf of non-LISP sites. A PETR is typically used when a LISP site needs to send traffic to non-LISP sites but the LISP site is connected through a service provider that does not accept non-routable EIDs as packet sources. PETRs act just like ETRs but for EIDs that send traffic to destinations at non-LISP sites. Map Server (MS) processes the registration of authentication keys and EID-to-RLOC mappings. ETRs sends periodic Map-Register messages to all its configured Map Servers. Map Resolver (MR): a LISP component which accepts LISP Encapsulated Map Requests, typically from an ITR, quickly determines whether or not the destination IP address is part of the EID namespace
