What's coming will come, and we'll meet it when it does, Estruturit test questions for ITIL-4-Transition - ITIL 4 Managing Professional Transition can help you have a good preparation for ITIL 4 Managing Professional exam effectively.

NEW QUESTION: 1 Which two terms can take the place of the wildcard mask in an ACL? (Choose two.)
A. deny **B.** eq **C.** any **D.** all **E.** host
Answer: C, E

NEW QUESTION: 2 You have an Azure Cosmos DB account named Account1. Account1 includes a database named DB1 that contains a container named Container1. The partition key for Container1 is set to /city. You plan to change the partition key for Container1. What should you do first?
A. Implement the Azure Cosmos DB.NET.SDK. **B.** Regenerate the keys for Account1. **C.** Create a new Azure Cosmos DB account. **D.** Delete Container1.
Answer: C
Explanation: The Change Feed Processor and Bulk Executor Library, in Azure Cosmos DB can be leveraged to achieve a live migration of your data from one container to another. This allows you to re-distribute your data to match the desired new partition key scheme, and make the relevant application changes afterwards, thus achieving the effect of "updating your partition key".
Reference: <https://devblogs.microsoft.com/cosmosdb/how-to-change-your-partition-key/>

NEW QUESTION: 3 Refer to the exhibit. From R1, a network administrator is able to ping the serial interface of R2 but, unable to ping any of the subnets attached to Router B. Based on the partial outputs in the exhibit, what could be the problem?
A. The EIGRP network statements are incorrectly configured. **B.** EIGRP does not support VLSM. **C.** The IP addressing on the serial interface of Router A is incorrect. **D.** EIGRP has been configured with an invalid autonomous system number. **E.** The routing protocol has summarized on the classful boundary.
Answer: E
Explanation: CCNA - EIGRP Common Question
Reference: <http://www.orbitco-ccna-pastquestions.com/CCNA---EIGRP-Common-Question.php>

Explanation: If you look carefully at the R2 ip route, you will discover that the R2 does not learn any network from R1; this is because the routing protocol used here (EIGRP) performs auto summary when advertising routes to peers across a network. So in this case the address 172.17.0.0/16 is a summarized address. If the router was configured with no autosummary

command, R2 LAN addresses would have been advertised and reached.
