NEW QUESTION: 1A. Option CB. Option BC. Option DD. Option A**Answer: B**

NEW QUESTION: 2A. Option CB. Option BC. Option DD. Option A**Answer: B**

NEW QUESTION: 3Which two modes of operation does BFD support? (Choose two.)**A.** passive mode**B.** echo mode**C.** aggressive mode**D.** asynchronous mode**E.** demand mode**F.** synchronous mode**Answer: D,E****Explanation:**A session may operate in one of two modes: asynchronous mode and demand mode. In asynchronous mode, both endpoints periodically send Hello packets to each other. If a number of those packets are not received, the session is considered down. In demand mode, no Hello packets are exchanged after the session is established; it is assumed that the endpoints have another way to verify connectivity to each other, perhaps on the underlying physical layer. However, either host may still send Hello packets if needed. Reference: http://en.wikipedia.org/wiki/Bidirectional_Forwarding_Detection
