Our products are better than all the cheap C_DS_43 Exam braindumps you can find elsewhere, try free demo.

NEW QUESTION: 1 Which statement is TRUE regarding network firewalls preventing Web Application attacks?
A. Network firewalls cannot prevent attacks because ports 80 and 443 must be opened.
B. Network firewalls cannot prevent attacks because they are too complex to configure.
C. Network firewalls can prevent attacks because they can detect malicious HTTP traffic.
D. Network firewalls can prevent attacks if they are properly configured.
Answer: A
Explanation: Explanation/Reference: Network layer firewalls, also called packet filters, operate at a relatively low level of the TCP/IP protocol stack, not allowing packets to pass through the firewall unless they match the established rule set. To prevent Web Application attacks an Application layer firewall would be required.

NEW QUESTION: 2 Assuming the project was generated using the AEM maven archetype, which maven command triggers the build and deployment of a content-package to a publish instance?
A. mvn install-PautoinstallPackage
B. mvn install-PautoinstallBundle
C. mvn installdeploy -Pmode=autoinstallpackage
D. mvn install -PautoinstallpacketPublish
Answer: A

NEW QUESTION: 3

以下の各ステートメントについて、そのステートメントが正しい場合は「はい」を選択してください。そうでなければ、いいえを選択します。

注：それぞれ正しい選択は1ポイントの価値があります。
Answer: Explanation: Explanation
Box 1: No Azure firewall does not encrypt network traffic. It is used to block or allow traffic based on source/destination IP address, source/destination ports and protocol.
Box 2: No A network security group does not encrypt network traffic. It works in a similar way to a firewall in that it is used to block or allow traffic based on source/destination IP address, source/destination ports and protocol.
Box 3: No The question is rather vague as it would depend on the configuration of the host on the Internet. Windows Server does come with a VPN client and it also supports other encryption methods such as IPsec encryption or SSL/TLS so it could encrypt the traffic if the Internet host was configured to require or accept the encryption. However, the VM could not encrypt the traffic to an Internet host that is not configured to require the encryption.
