**NEW QUESTION: 1**In the Catalog Entry data model, which table represents a family of products with a common name and description, used for fulfillment?**A. CATENTRYB. BASEITEMC. CATENTTYPED. ITEMFFMCTR****Answer: B**

**NEW QUESTION: 2****A. Option AB. Option EC. Option CD. Option BE. Option D****Answer: A,C,E**  
Explanation:<http://www.info-it.net/cisco/ccna/exam-tips/flow-control.php> During Transfer of data, a high speed computer is generating data traffic a lot faster than the network device can handle in transferring to destination, so single gateway or destination device cannot handle much amount of traffic that is called "Congestion". Buffering The Technie is used to control the data transfer when we have congestion, when a network device receive a data it stores in memory section and then transfer to next destination this process called "Buffering".  
Windowing Whereas Windowing is used for flow control by the Transport layer.Say the sender device is sending segments and the receiver device can accommodate only a fixed number of segments before it can accept more, the two devices negotiate the window size during the connection setup.This is done so that the sending device doesn't overflow the receiving device's buffer.Also the receiving device can send a single acknowledgement for the segments it has received instead of sending an acknowledgement after every segment received.Also, this window size is dynamic meaning, the devices can negotiate and change the window size in the middle of a session. So if initially the window size is three and the receiving device thinks that it can accept more number of segments in its buffer it can negotiate with the sending device and it increase it to say 5 for example.Windowing is used only by TCP since UDP doesn't use or allow flow control.

**NEW QUESTION: 3**What always stays the same when a chemical reaction takes place?**A. the amount of gasB. the amount of solid matterC. the number of atomsD. the amount of disorderE. the number of molecules****Answer: C**  
Explanation:Explanation/Reference:Explanation:The number of atoms stays constant throughout a chemical reaction. The number of molecules can change (choice b). For example, in photosynthesis, 6 molecules of carbon dioxide and 6 molecules of water (total 12 molecules) can react to form 1 molecule of glucose and 6 molecules of oxygen (total of 7 molecules). Similarly, the amount of gas and solid can change (choices c and d). The amount of disorder in the universe is always increasing, so it does not have to stay constant through a reaction (choice e).
