A safe replacement such as Innergen, FM-200, or other non ozone depleting agent would be used.The goal of the Montreal Protocol is the cessation of production of ozone depleting agents.The Montreal Protocol on Substances That Deplete the Ozone Layer is a landmark international agreement designed to protect the stratospheric ozone layer. The treaty was originally signed in 1987 and substantially amended in 1990 and 1992. The Montreal Protocol stipulates that the production and consumption of compounds that deplete ozone in the stratosphere--chlorofluorocarbons (CFCs), halons, carbon tetrachloride, and methyl chloroform--are to be phased out by 2000 (2005 for methyl chloroform).Scientific theory and evidence suggest that, once emitted to the atmosphere, these compounds could significantly deplete the stratospheric ozone layer that shields the planet from damaging UV-B radiation. The United Nations Environment Programme (UNEP) has prepared a Montreal Protocol Handbook that provides additional detail and explanation of the provisions.References:TIPTON, Hal, (ISC)2, Introduction to the CISSP Exam presentation.and http://ozone.unep.org/Publications/MP_Handbook/MP-Handbook-2009.pdf
