**NEW QUESTION: 1**Your network contains a server named Server1 that has Windows Server 2008 R2. An administrator runs the following command on Server1: netsh.exe advfirewall reset You discover that you can no longer access Server1 on port 3389. You need to ensure that you can access Server1 on port 3389. Which firewall rule should you enable? **A.** Remote Desktop (TCP-In) **B.** File and Printer Sharing (SMB-In) **C.** Remote Service Management (RPC) **D.** File and Printer Sharing (Echo Request -ICMPv4-In) **Answer: A** **Explanation:** Remote Desktop Protocol (RDP) is a proprietary protocol developed by Microsoft, which provides a user with a graphical interface to another computer. The protocol is an extension of the ITU-T T.128 application sharing protocol. Clients exist for most versions of Microsoft Windows (including Windows Mobile), Linux, Unix, Mac OS X, Android, and other modern operating systems. By default, the server listens on TCP port 3389. Microsoft currently refers to their official RDP server software as Remote Desktop Services, formerly "Terminal Services". Their official client software is currently referred to as Remote Desktop Connection, formerly "Terminal Services Client".

**NEW QUESTION: 2**A user reports they are unable to access a file on a mapped network drive. A technician discovers the server where the file is located did not come back online after last night's power outage and manually powers the server back online.
