NEW QUESTION: 1Your network contains a server named Server1 that runs Windows Server 2012. <http://www.altaro.com/hyper-v/vss-crash-consistent-vs-application-consistent-vss-backups-post-2-of-2/> Backup Operations in Hyper-V No VSS Writer Available? In some cases, you need an application-consistent backup but there is no VSS writer available. One example of this is MySQL. Hyper-V backups of virtual machines containing MySQL will always result in either a crashconsistent or an image-level backup. For MySQL, the latter is probably acceptable as MySQL doesn't perpetually expand the log file. However, if you're using MySQL within a VSS-aware VM, then a Hyper-Vbased backup tool is going to take a crash- consistent backup. MySQL (like any other database system) isn't always recoverable from a crash-consistent backup; even when recovery is possible, it may be painful. MySQL is just one example; any number of line-of-business applications could tell a similar tale. In the case of MySQL, one solution is to find a guest-level backup application that is MySQL-aware and can back it up properly. For applications for which no backup application has a plug-in, you may need to have pre- and post-backup scripts that stop services or close applications. If brief downtime is acceptable, you can disable the Backup item in Hyper-V Integration Services, thereby forcing Hyper-V to save the state of the VM during backup. This technique results in an image-level backup and can be used on any application that doesn't have a VSS writer.
