NEW QUESTION: 2次の展示に示すように、Language Understanding (LUIS) APIを使用するアプリがあります。
ドロップダウンメニューを使用して、図に示されている情報に基づいて各ステートメントを完成させる回答の選択肢を選択します。注：それぞれの正しい選択には1ポイントの価値があります。
Answer: Explanation: Explanation
Box 1: train Utterances are input from the user that your app needs to interpret. To train LUIS to extract intents and entities from them, it's important to capture a variety of different example utterances for each intent. Active learning, or the process of continuing to train on new utterances, is essential to machine-learned intelligence that LUIS provides.
Box 2: creating intents Each intent needs to have example utterances, at least 15. If you have an intent that does not have any example utterances, you will not be able to train LUIS. If you have an intent with one or very few example utterances, LUIS will not accurately predict the intent.
Box 3: never published In each iteration of the model, do not add a large quantity of utterances. Add utterances in quantities of 15. Train, publish, and test again.
