Hope you pass exam 100% for sure.

NEW QUESTION: 1 Which type of administrator commands does configuration auditing track?
A. PAPI-enabled commands **B.** All UNIX, isi, isi_ and sudo commands **C.** Commands run by the SystemAdmin and CompAdmin users only **D.** Commands run by the "root" user **Answer: A**

NEW QUESTION: 2 DRAG DROP Note: This question is a part of a series of questions that present the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series. Start of repeated scenario You have a Microsoft SQL Server database that contains the following tables. The following columns contain data information: Date[Month] in the mmyyyy format Date[Date_ID] in the ddmmyyyy format Date[Date_name] in the mm/dd/yyyy format Monthly_returns[Month_ID] in the mmyyyy format The Order table contains more than one million rows. The Store table has relationship to the Monthly_returns table on the Store_ID column. This is the only relationship between the tables. You plan to use Power BI desktop to create an analytics solution for the data. End of repeated scenario. You need to display the month as a three-letter abbreviation, followed by the year, such as jan2017. You add a calculated column in Power BI. Which DAX formula should you use for the calculated column? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Select and Place: **Answer:** Explanation: Explanation/Reference: Explanation: References: <https://msdn.microsoft.com/en-us/library/ee634811.aspx>

NEW QUESTION: 3 You are using a PL/SQL program unit in the Orders form to display an image for the selected product in the Order Items block. The code is called from several different triggers in the form. The code (with line numbers added) is:
1. PROCEDURE get_image IS
2. Product_image_id ITEM := FIND_ITEM ('control.product_image');
3. Filename VARCHAR2(250);
4. BEGIN
5. Filename := TO_CHAR(:order_items.product_id) || '.jpg';
6. READ_IMAGE_FILE (filename, 'jpeg', product_image_id);
7. END;
Management wants all codes to be in PL/SQL libraries to facilitate reuse. You create a PL/SQL library and drag the program unit from the orders form to the Program Units node of the library. You then delete the program unit from the Orders form. What three things must you do to compile the PL/SQL library and to use the code in the Orders form?
A. Generate the a .plx file. **B.** Delete the BEGIN and END statements (lines 4 and 7). **C.** insert the RELEASE keyword between lines 1 and 2. **D.** Attach the library to the orders form. **E.** Save the library. **F.** Change product_id to an in parameter and filename to an OUT parameter. **G.** Change line 5 to: filename := to_char(name_in 'order_items.product_id') || '.jpg'; **H.** Change the way the program unit is called in the Orders form. **Answer: D,E,H**
Explanation: **E:** Save and compile the library. **G:** select the Attached Libraries node and click Create. In the Attach Library dialog box, click Browse to navigate to the saved library and open it, then answer Yes to the alert that asks if you want to remove the path. **H:** Modify the to simply call the procedure from the attached library:
