NEW QUESTION: 1Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You are designing a one-way integration from the Common Data Service to another system. You must use an Azure Function to update the other system. The integration must send only newly created records to the other system. The solution must support scenarios where a component of the integration is unavailable for more than a few seconds to avoid data loss. You need to design the integration solution. Solution: Register a service endpoint in the Common Data Service that connects to an Azure Service Bus queue. Register a step at the endpoint which runs asynchronously on the record's Create message and in the portoperation stage. Configure the Azure Function to process records as they are added to the queue. Does the solution meet the goal? **A. Yes** **B. No**
Answer: A Explanation: Microsoft Dataverse supports integration with Azure. For the Dataverse and Azure connection to work, there must be at least one solution in an Azure Service Bus solution account, where the solution contains one or more service endpoints. For a queue endpoint contract, a listener doesn't have to be actively listening. Reference: <https://docs.microsoft.com/en-us/powerapps/developer/common-data-service/azure-integration>

NEW QUESTION: 2 You have a server named Server1 that runs Windows Server 2012 R2 and is used for testing. A developer at your company creates and installs an unsigned kernel-mode driver on Server1. The developer reports that Server1 will no longer start. You need to ensure that the developer can test the new driver. The solution must minimize the amount of data loss. Which Advanced Boot Option should you select? **A. Last Known Good Configuration (advanced)** **B. Disable Driver Signature Enforcement** **C. Repair Your Computer** **D. Disable automatic restart on system failure**
Answer: B Explanation: Explanation/Reference: Explanation: A. By default, 64-bit versions of Windows Vista and later versions of Windows will load a kernel-mode driver only if the kernel can verify the driver signature. However, this default behavior can be disabled to facilitate early driver development and non-automated testing. Incorrect Answers: B. specifies that Windows automatically restarts your computer when a failure occurs. C. Developer would not be able to test the driver as needed. D. Removes or repairs critical windows files, Developer would not be able to test the driver as needed and some file loss. References: Installing Windows Server 2012.
